

The app, screen by screen — and the API behind each part

This guide uses real pictures of the LEICHT catalog app. For every part you can see and tap, it tells you in plain words what it does and which backend address (API) gives it the data.

Backend **/design-book** Addresses **11** Items **16,393** Cards **1,338** Programmes **120**

How to read this. Black dots ①②③ sit on the picture. The table right under it explains each dot: what the part is called, what it does, and the API address that feeds it. **GET** means "read data". **POST** means "send/upload data".

Title bar, programme picker, and size buttons

This strip sits at the very top. It shows the catalog totals, lets you pick a kitchen line (a "programme"), and lets you filter by size.

Real screenshot · masthead + world bar + size bar

PART	WHAT IT DOES	API ADDRESS
1 Item count	Shows how many items and programmes are in the catalog right now.	GET /stats
2 Programme picker	Pick a kitchen line. This changes prices and what is available. Also feeds Mix and ANTOSO.	GET /programs
3 Width buttons (W)	Tap a width to show only items of that width. "All" shows every width.	GET /cards · ?widthCm=60
4 Height & Depth (H · D)	Height filters the grid the same way as width. Depth is not a grid filter — it is chosen per item and sent to /resolve .	GET /cards · ?heightCm

Categories and their counts

The left menu is the list of catalog areas (Base, Tall, Wall...). Each line shows how many products are inside. Tapping a line filters the middle of the screen.

Real screenshot · category tree

PART	WHAT IT DOES	API ADDRESS
1 Category + count	A top area like "Base" with the number of products in it. Tap it to show only that area.	GET /categories
2 Sub-menu line	A smaller group inside the area, like "Sinks" or "Cooktops". Tap to narrow further.	GET /categories · ?subcategory

Note about counts. The old app shows 1632 cards. The file the client sent us has 1338 cards. We agreed the client file is the correct one, so our counts match the file.

A product card in the grid

The middle of the screen is a grid of tiles. Each tile is one product. It shows a name, a badge, size buttons, and small round programme buttons. Tapping a size or programme button jumps to the exact order code.

Real screenshot · grid card

PART	WHAT IT DOES	API ADDRESS
1 Group name	The name of the product family, like "Cooktop Unit".	GET /cards · cardName

2	Programme badge	Shows which lines it fits: <code>ALL</code> , or <code>P · C</code> , or one letter. We work this out from the tiers.	<code>GET /cards · programmeBadge</code>
3	Size buttons (H·W·D)	The blue button is the chosen size. Tap another to switch. Each one points to a real order code.	<code>GET /resolve · ?cardId&widthCm</code> (see below)
4	Programme dots	The round <code>P · P1 · C · C1 · A</code> buttons. <code>P/C/A</code> are the base lines. <code>P1/C1</code> are the one-handle "plus" options.	<code>GET /resolve · ?tierCode=P1</code>

The whole grid (all the tiles together) comes from `GET /cards`. The heart ♥ and copy 📄 buttons are saved on the phone/browser only — no API yet.

PICTURE 3 · CLOSE-UP ON THE BUTTONS

How a button becomes an order code — `/resolve` in full

The size buttons ③ and programme dots ④ on the card do **not** carry the final order code themselves. When you tap one, the app asks `/resolve` : "for this card, with this width / height / depth / programme, what is the real order code?" It sends the matching code back, and the app opens that code.

You give it the **cardId** plus any mix of the values you have chosen so far. Every value you send must match a real item **exactly** (same width, same tier, and so on). Send one value, or send them all — more values means a narrower, more exact answer.

PARAMETER (EXACT NAME)	TYPE	NEED IT?	WHAT IT MEANS
cardId	text	Yes	Which product card. The family the button lives on. Always required.
widthCm	number	no	Width in cm, like <code>80</code> . Comes from the W buttons.
heightCm	number	no	Height in cm. Comes from the H buttons.
depthCm	number	no	Depth (carcass) in cm. Comes from the D buttons.

tierCode	text	no	The programme dot: one of P C A P1 C1 .
variantKey	text	no	Only for cards whose selector is a named variant, not a size. Skip it for normal size cards.

Example — you tapped the **80 cm** width button, on the **P** line, on a cooktop card:

```
GET /design-book/resolve?cardId=64f...e12&widthCm=80&tierCode=P

// answer
{
  "data": {
    "resolved": "TK6080BZ2",      // the order code to open
    "matchCount": 1,
    "matches": [ { "sku": "TK6080BZ2", "widthCm": 80, "tierCode": "P", ... } ]
  }
}
```

What comes back (3 fields). **resolved** — the single best order code to open, or **null** if nothing matched. **matchCount** — how many items fit your choice. **matches** — the short record of each fitting item (heavy fields removed). The app takes **resolved** and opens its detail page with **GET /detail/:sku**.

If more than one matches. When your choice is not specific enough (for example only **cardId**), **matchCount** is greater than 1 and **resolved** is simply the first match. Add more values (width, then tier...) to narrow it down to exactly one code.

PICTURE 4 • THE DETAIL PAGE

What opens when you tap a product

Tapping a tile slides open the full detail page. One API call fills this whole page:

GET /detail/:sku. Each block below is one piece of that answer.

Cooktop Unit · Top Blender · BZ2. This cooktop / downdraft unit can be

set up for standard or deep installation when the appliance, ventilation routing or service clearances need extra carcass depth. Use the tabs for the relevant codes.

SPECIFICATION

Width ⁵	600 mm
Height	795 mm
Depth	560 mm carcass
Modifiers	—
Carcass line	80
Weight	46.4 kg
Volume	0.29 m ³
Catalog page	22.09 · PDF p.267

RESTRICTIONS

- No⁶ processed handle vertical
- Cupboards 45 degree chamfered edge on both sides
- Fronts -Q handle 790, 791
- no handle 605, 606
- no handle 670 671 635 636

PROGRAMME AVAILABILITY

No programme exclusions.

7

MODIFICATIONS — HOW TO

P1 — Primo, one handle on top — order `P1TK6080BZ2`. Bottom drawers open 760 (latch) or 761 (electric).

Handle-less mechanical (760) — Tip-Softclose touch latch. eOpus: `set handle 760`

Handle-less electric (761) — SensoMatic. eOpus: `set handle 761`

`+SMNK200US`

`+SMVK200`

`+SMNT (transformer)`

761 electric ALWAYS needs the SMNT transformer — not added automatically

PLANNING NOTES

Control panel on top.

9

Real screenshot · full detail panel (product image hidden — loads from the web)

BLOCK	WHAT IT SHOWS	COMES FROM (IN THE ANSWER)
1 Title & code	Area, name, and the order code (like TK6080BZ2).	header

2 Configure buttons	Change width, height, depth, or programme. Each choice is already linked to its order code.	<code>configure</code>
3 Description	Short bullet points about the item.	<code>description</code>
4 Alterations tabs	Tabs of extra parts you can add (Installation, Visible Sides, Alterations, Pullouts) with counts.	<code>alterations</code>
5 Specification	Sizes in mm, weight, volume, and the catalog page. Weight and volume are worked out for you.	<code>specification</code>
6 Restrictions	Rules to keep in mind (for example, no vertical recessed handle).	<code>restrictions</code>
7 Programme availability	Which programmes this item is sold in. Empty means it is sold in all of them.	<code>programmeAvailability</code>
8 Modifications — how to	Recipes to change the item: the "plus" P1/C1 code, and handle-less 760 / 761 with their part codes.	<code>modifications</code>
9 Planning notes	Extra planning advice (for example, "Control panel on top").	<code>planningNotes</code>

Also in the answer, not drawn on this page: `pricing` (book prices per programme) and `clickNote` .
The app shows price in a separate **Pricing** screen, not here.

All 11 API addresses in one list

Every address the app can use. All of them need a login token.

ADDRESS	WHAT IT GIVES	USED BY
POST / ingest	Upload a new catalog file. Items missing from the file are turned off.	Data upload
GET / cards	The grid of product tiles, grouped and with badges.	Middle grid
GET / cards/:cardId	Every version of one product.	Card details
GET / items	Search and list single codes.	Search & size filters
GET / items/:sku	Look up one order code.	Code lookup
GET / detail/:sku	The full detail page (Picture 4).	Detail page
GET / resolve	Turn a size/programme choice into the right order code. Params: <code>cardId</code> (required) + <code>widthCm</code> <code>heightCm</code> <code>depthCm</code> <code>tierCode</code> <code>variantKey</code> .	Every size/programme button
GET / programs	The list of kitchen lines.	Programme picker
GET / categories	The left menu tree with counts.	Left menu
GET / meta	Shared rules: prices, handle recipes, ANTOSO.	Prices & rules
GET / stats	The catalog totals.	Top bar count
